

# Smart Contract Audit

FOR  
**ALT CRYPTO**

DATED : 24 August 23'

# AUDIT SUMMARY

---

**Project name – ALT CRYPTO**

**Date:** 24 August 2023

**Scope of Audit-** Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

**Audit Status:** **Passed**

## Issues Found

Status	Critical	High	Medium	Low	Suggestion
Open	0	0	0	0	1
Acknowledged	0	0	0	0	0
Resolved	0	0	0	0	0

---

# USED TOOLS

---

## Tools:

### 1- Manual Review:

A line by line code review has been performed by audit ace team.

**2- BSC Test Network:** All tests were conducted on the BSC Test network, and each test has a corresponding transaction attached to it. These tests can be found in the "Functional Tests" section of the report.

### 3- Slither :

The code has undergone static analysis using Slither.

### Testnet version:

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:

<https://testnet.bscscan.com/address/0x30cCd4CeD5bb60e6CA065D17e8A315EEa0e5E574>

---

# Token Information

---

**Token Address :**

0xfe863344c2dfBF624A99D7151C889729A5864846

**Name:** ALT CRYPTO

**Symbol:** ALTC

**Decimals:** 18

**Netowrk:** BSC

**Token Type:** BEP20

**Owner:** 0xB0F969d7B93Cc11B9a479F094C058889a3B8b94F  
(at time of writing the audit)

**Deployer:**

0xB0F969d7B93Cc11B9a479F094C058889a3B8b94F

**Token Supply:** 10,000,000,000

**Checksum:**

fa17c9f5736affaf74cb2b9343cf49e4888f335b

**Testnet version:**

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:

<https://testnet.bscscan.com/address/0x30cCd4CeD5bb60e6CA065D17e8A315EEa0e5E574>

---

# TOKEN OVERVIEW

---

**buy fee: 0%**

**Sell fee: 2%**

**transfer fee: 0%**

---

**Fee Privilege: Static fees**

---

**Ownership: Owned**

---

**Minting: None**

---

**Max Tx: No**

---

**Blacklist: No**

---

**Other Privileges:**

- Initial distribution of the tokens

---

# AUDIT METHODOLOGY

---

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
  - Manual review of the entire codebase by our experts, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
  - Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
  - Test coverage analysis determines whether the test cases are covering the code and how much code is exercised when we run the test cases.
  - Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
  - Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.
-

# VULNERABILITY CHECKLIST

---

- |                                    |                               |
|------------------------------------|-------------------------------|
| ✓ Return values of low-level calls | ✓ Gasless Send                |
| ✓ Private modifier                 | ✓ Using block.timestamp       |
| ✓ Multiple Sends                   | ✓ Re-entrancy                 |
| ✓ Using Suicide                    | ✓ Tautology or contradiction  |
| ✓ Gas Limitand Loops               | ✓ Timestamp Dependence        |
| ✓ Address hardcoded                | ✓ Revert/require functions    |
| ✓ Exception Disorder               | ✓ Use of tx.origin            |
| ✓ Using inline assembly            | ✓ Integer overflow/underflow  |
| ✓ Divide before multiply           | ✓ Dangerous strict equalities |
| ✓ Missing Zero Address Validation  | ✓ Using SHA3                  |
| ✓ Compiler version not fixed       | ✓ Using throw                 |
-

# CLASSIFICATION OF RISK

## Severity

## Description

### ◆ Critical

These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.

### ◆ High-Risk

A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.

### ◆ Medium-Risk

A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.

### ◆ Low-Risk

A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.

### ◆ Gas Optimization /Suggestion

A vulnerability that has an informational character but is not affecting any of the code.

## Findings

# INHERITANCE TREE

---

# POINTS TO NOTE

---

- Owner is not able to blacklist an arbitrary address.
  - Owner is not able to disable trades
  - Owner is not able to limit buy/sell/transfer/wallet amounts
  - Owner is not able to mint new tokens
-

# STATIC ANALYSIS

```

---

# MANUAL TESTING

---

**Missing logic** – Lack of event emission

Severity: **Informational**

function: `_takeMarketing` - `_takeBurnFee` - `_takeRnDFee`

Status: Open

## Overview:

Blockchain explorers may not show holders correctly because contract is not emitting “Transfer” events when taking fee (marketing, burn, RnD).

## Suggestion

Emit events from this function after taking fees:

Sample code:

```
function _takeRnDFee(address from, uint256 tRnD) private {
    uint256 currentRate = _getRate();
    uint256 rRnD = tRnD.mul(currentRate);
    _rOwned[_RnDTax] = _rOwned[_RnDTax].add(rRnD);
    if (!_isExcluded[_RnDTax]) _tOwned[_RnDTax] = _tOwned[_RnDTax].add(tRnD);
    emit Transfer(from, _RnDTax, tRnD);
}
```
