

# Smart Contract Audit

**FOR** 

# **HALLOWEEN**

DATED: 28 October 23'

### MANUAL TESTING

**Centralization** - Enabling Trades

Severity: High

function: enableTrading

Status: Open

### Overview:

The enableTrading function permits only the contract owner to activate trading capabilities. Until this function is executed, no investors can buy, sell, or transfer their tokens. This places a high degree of control and centralization in the hands of the contract owner.

```
function enableTrading() external onlyOwner {
   tradingActive = true;
   swapEnabled = true;
}
```

### Suggestion

To reduce centralization and potential manipulation, consider one of the following approaches:

- 1. Automatically enable trading after a specified condition, such as the completion of a presale, is met.
- 2.If manual activation is still desired, consider transferring the ownership of the contract to a trustworthy, third-party entity like a certified "PinkSale Safu" developer. This can provide investors with more confidence in the eventual activation of trading capabilities, mitigating concerns of potential bad faith actions by the original owner

### MANUAL TESTING

**Centralization** - Updating fees

Severity: High

function: updateFees

Status: Open

#### Overview:

Owner is able to adjust buy/sell/transfer fees within 0-100%. there are no upper bounds for maximum amount of fees

```
function updateFees(
    uint256 _buyLiquidityFee,
    uint256 _buyMarketingFee,
    uint256 _sellLiquidityFee,
    uint256 _sellMarketingFee
) external onlyOwner {
    buyLiquidityFee = _buyLiquidityFee;
    buyMarketingFee = _buyMarketingFee;
    buyTotalFees = buyLiquidityFee + buyMarketingFee;
    sellLiquidityFee = _sellLiquidityFee;
    sellMarketingFee = _sellMarketingFee;
    sellTotalFees = sellLiquidityFee + sellMarketingFee;
}
```

#### Suggestion

set an upper bound for maximum amount of fees

```
function updateFees(
    uint256 _buyLiquidityFee,
    uint256 _buyMarketingFee,
    uint256 _sellLiquidityFee,
    uint256 _sellMarketingFee
) external onlyOwner {
    buyLiquidityFee = _buyLiquidityFee;
    buyMarketingFee = _buyMarketingFee;
    buyTotalFees = buyLiquidityFee + buyMarketingFee;
    sellLiquidityFee = _sellLiquidityFee;
    sellMarketingFee = _sellMarketingFee;
    sellTotalFees = sellLiquidityFee + sellMarketingFee;
    require(buyTotalFees <= 10 && sellTotalFees <= 10, "Can't set fees more than 10%");
}</pre>
```

## **AUDIT SUMMARY**

Project name - HALLOWEEN

Date: 28 October 2023

**Scope of Audit-** Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

**Audit Status: Passed with High Risk** 

### **Issues Found**

Status	Critical	High	Medium	Low	Suggestion
Open	0	2	0	0	0
Acknowledged	0	0	0	0	0
Resolved	0	0	0	0	0

# **USED TOOLS**

### Tools:

### 1- Manual Review:

A line by line code review has been performed by audit ace team.

2- BSC Test Network: All tests were conducted on the BSC Test network, and each test has a corresponding transaction attached to it. These tests can be found in the "Functional Tests" section of the report.

### 3-Slither:

The code has undergone static analysis using Slither.

### **Testnet version:**

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:

https://testnet.bscscan.com/token/0x77dE11a0c82cdFa9cBE00b5BEe7B7D6105DABF8d

# **Token Information**

### Token Address:

0x3153B9E8525A5Bc9BC9514579C93EF02F204e162

Name: HALLOWEEN

Symbol: \$HLW

Decimals: 18

**Network:** Binance smart chain

Token Type: BEP20

Owner: 0x0FFEEBB4ce58bB07CEc258086Fb50B2E155392D7

### Deployer:

0x0FFEEBB4ce58bB07CEc258086Fb50B2E155392D7

Token Supply: 1,000,000,000

### Checksum:

af747e29e250fa2181f56bced993ee804a62665c

### **Testnet version:**

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address: https://testnet.bscscan.com/token/0x77dE11a0c82cdFa9cBE00b5BEe7B7D6105DABF8d

# TOKEN OVERVIEW

buy fee: 0-100%

**Sell fee:** 0-100%

transfer fee: 0-100%

Fee Privilege: Owner

Ownership: Owned

Minting: None

Max Tx: No

Blacklist: No

### Other Privileges:

- Initial distribution of the tokens
- Modifying fees
- Enabling trades

# **AUDIT METHODOLOGY**

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
- Manual review of the entire codebase by our experts, which is the process of reading source code line-byline in an attempt to identify potential vulnerabilities.
- Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
- Test coverage analysis determines whether the test cases are covering the code and how much code isexercised when we run the test cases.
- Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
- Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.

# **VULNERABILITY CHECKLIST**

# **CLASSIFICATION OF RISK**

### Severity

- Critical
- High-Risk
- Medium-Risk
- Low-Risk
- Gas Optimization
  /Suggestion

### **Description**

These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.

A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.

A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.

A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.

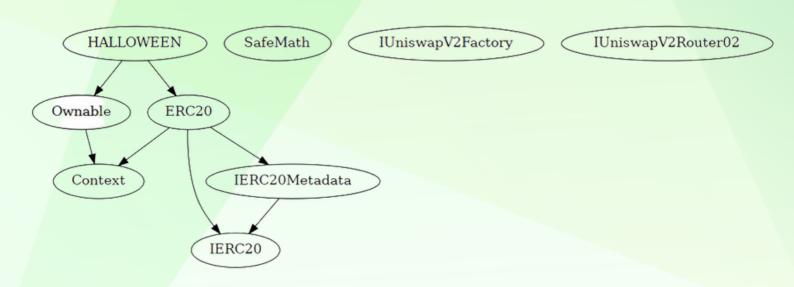

A vulnerability that has an informational character but is not affecting any of the code.

### **Findings**

Severity	Found
◆ Critical	0
♦ High-Risk	2
◆ Medium-Risk	0
♦ Low-Risk	0
<ul><li>Gas Optimization /</li><li>Suggestions</li></ul>	0

## **INHERITANCE TREE**

### **POINTS TO NOTE**

- Owner is able to adjust buy/transfer/sell fees within 0-100%
- Owner is not able to blacklist an arbitrary wallet
- Owner is not able to disable trades
- Owner is not able to mint new tokens
- Owner is not able to set maximum wallet and maximum buy/sell/transfer limits
- Owner must enable trades manually

### STATIC ANALYSIS

```
- uniswapV2Router.swapExactTokensForETHSupportingFeeOnTransferTokens(tokenAmount,0,path,address(this),block.timestamp) (contracts/Token.sol#671-677)
- addLiquidity(liquidityTokens,ethForLiquidity) (contracts/Token.sol#730)
               - addLiquidity(liquidityTokens,ethForLiquidity) (contracts/Token.sol#730)
- uniswapV2Router.addLiquidityETH{value: ethAmount}(address(this),tokenAmount,0,0,devWallet,block.timestamp) (contracts/Token.sol#685-692)
               Event emitted after the call(s)
- addLiquidity(liquidityTokens,ethForLiquidity) (contracts/Token.sol#730)
- SwapAndLiquify(amountToSwapForETH,ethForLiquidity,tokensForLiquidity) (contracts/Token.sol#731-735)
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#reentrancy-vulnerabilities-3
HALLOWEEN__transfer(address,address,uint256) (contracts/Token.sol#550-660) has a high cyclomatic complexity (13). Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#cyclomatic-complexity
INFO:Detectors:
SafeMath.add(uint256,uint256) (contracts/Token.sol#286-288) is never used and should be removed SafeMath.div(uint256,uint256,string) (contracts/Token.sol#317-326) is never used and should be removed
SafeMath.sub(uint256,uint256,string) (contracts/Token.sol#306-315) is never used and should be removed
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#dead-code
solc-0.8.17 is not recommended for deployment
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#incorrect-versions-of-solidity
INFO:Detectors:
INFO:Detectors:
Parameter HALLOWEEN.updateFees(uint256,uint256,uint256,uint256)._buyHarketingFee (contracts/Token.sol#476) is not in mixedCase Parameter HALLOWEEN.updateFees(uint256,uint256,uint256)._buyMarketingFee (contracts/Token.sol#477) is not in mixedCase Parameter HALLOWEEN.updateFees(uint256,uint256,uint256,uint256)._sellLiquidityFee (contracts/Token.sol#478) is not in mixedCase Parameter HALLOWEEN.updateFees(uint256,uint256,uint256,uint256)._sellMarketingFee (contracts/Token.sol#479) is not in mixedCase Variable HALLOWEEN._isExcludedMaxTransactionAmount (contracts/Token.sol#404) is not in mixedCase
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#conformance-to-solidity-naming-conventions
INFO:Detectors:
- swapTokensAtAmount = (totalSupply * 1000000000) / 1 (contracts/Token.sol#443)

HALLOWEEN.updateSwapTokensAtAmount(uint256) (contracts/Token.sol#496-509) uses literals with too many digits:
- require(bool,string)(newAmount >= (totalSupply() * 1) / 100000,Swap amount cannot be lower than 0.001% total supply.) (contracts/Token.sol#499-502)

Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#too-many-digits
HALLOWEEN.maxTransactionAmount (contracts/Token.sol#383) should be immutable HALLOWEEN.maxWallet (contracts/Token.sol#385) should be immutable
```

Result => A static analysis of contract's source code has been performed using slither,

No major issues were found in the output

INFO:Slither:./contracts/Token.sol analyzed (9 contracts with 88 detectors), 35 result(s) found

# **FUNCTIONAL TESTING**

#### 1- Adding liquidity (passed):

https://testnet.bscscan.com/tx/0x39906540368236c457de12d38f16bfbfac7e933d0 1454f27bd2191d32f372653

### 2- Buying when excluded (0% tax) (passed):

https://testnet.bscscan.com/tx/0x670dc1e35f05adb9948569502b0c12ddc69a9ffb9bd3c20cb4d3c73f3c13c5af

#### 3- Selling when excluded (0% tax) (passed):

https://testnet.bscscan.com/tx/0xfd9b590890e6e3c9d73928c27b55f5651b9e14856 163890913868a85bb6f214c

### 4- Transferring when excluded from fees (0% tax) (passed):

https://testnet.bscscan.com/tx/0xf18a97d544cacb7e7a2b6daf521bd42d6ebb4fc0ccc98cc5543084c740ff99a6

#### 5- Buying when not excluded from fees (tax 0-100%) (passed):

https://testnet.bscscan.com/tx/0x9ff0ede588761f0524481dddf80639f5292b5b932 c8a90fac39cbb972920e3d0

#### 6- Selling when not excluded from fees (tax 0-100%) (passed):

https://testnet.bscscan.com/tx/0x83f0096dd46e17a72a1fb981e8cce350061c52dc97a13e85162ca014e997f24c

### 7- Transferring when not excluded from fees (0-100% tax )(passed):

https://testnet.bscscan.com/tx/0x071f5d69a5c937bf0b118cfcb7830e19cf37b1462d6 5766f0cec19bd2b7f423f

#### 8- Internal swap (BNB set to dev wallet + Auto-liquidity) (passed):

https://testnet.bscscan.com/tx/0x83f0096dd46e17a72a1fb981e8cce350061c52dc97a13e85162ca014e997f24c

### MANUAL TESTING

**Centralization** - Enabling Trades

Severity: High

function: enableTrading

Status: Open

### Overview:

The enableTrading function permits only the contract owner to activate trading capabilities. Until this function is executed, no investors can buy, sell, or transfer their tokens. This places a high degree of control and centralization in the hands of the contract owner.

```
function enableTrading() external onlyOwner {
   tradingActive = true;
   swapEnabled = true;
}
```

### Suggestion

To reduce centralization and potential manipulation, consider one of the following approaches:

- 1. Automatically enable trading after a specified condition, such as the completion of a presale, is met.
- 2.If manual activation is still desired, consider transferring the ownership of the contract to a trustworthy, third-party entity like a certified "PinkSale Safu" developer. This can provide investors with more confidence in the eventual activation of trading capabilities, mitigating concerns of potential bad faith actions by the original owner

### MANUAL TESTING

**Centralization** - Updating fees

Severity: High

function: updateFees

Status: Open

#### Overview:

Owner is able to adjust buy/sell/transfer fees within 0-100%. there are no upper bounds for maximum amount of fees

```
function updateFees(
    uint256 _buyLiquidityFee,
    uint256 _buyMarketingFee,
    uint256 _sellLiquidityFee,
    uint256 _sellMarketingFee
) external onlyOwner {
    buyLiquidityFee = _buyLiquidityFee;
    buyMarketingFee = _buyMarketingFee;
    buyTotalFees = buyLiquidityFee + buyMarketingFee;
    sellLiquidityFee = _sellLiquidityFee;
    sellMarketingFee = _sellMarketingFee;
    sellTotalFees = sellLiquidityFee + sellMarketingFee;
}
```

#### Suggestion

set an upper bound for maximum amount of fees

```
function updateFees(
    uint256 _buyLiquidityFee,
    uint256 _buyMarketingFee,
    uint256 _sellLiquidityFee,
    uint256 _sellMarketingFee
) external onlyOwner {
    buyLiquidityFee = _buyLiquidityFee;
    buyMarketingFee = _buyMarketingFee;
    buyTotalFees = buyLiquidityFee + buyMarketingFee;
    sellLiquidityFee = _sellLiquidityFee;
    sellMarketingFee = _sellMarketingFee;
    sellTotalFees = sellLiquidityFee + sellMarketingFee;
    require(buyTotalFees <= 10 && sellTotalFees <= 10, "Can't set fees more than 10%");
}</pre>
```
