

Smart Contract Audit

FOR

bankp2pgold

DATED: 9 June 23'

AUDIT SUMMARY

Project name - bankp2pgold

Date: 9 June, 2023

Scope of Audit- Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

Audit Status: Passed

Issues Found

Status	Critical	High	Medium	Low	Suggestion
Open	0	0	0	0	1
Acknowledged	0	0	0	0	0
Resolved	0	1	0	0	0

USED TOOLS

Tools:

1- Manual Review:

A line by line code review has been performed by audit ace team.

2- BSC Test Network: All tests were conducted on the BSC Test network, and each test has a corresponding transaction attached to it. These tests can be found in the "Functional Tests" section of the report.

3-Slither:

The code has undergone static analysis using Slither.

Testnet version:

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:

https://testnet.bscscan.com/token/0xc9952C25f69711 C522Fdb99a858583261f15A366

Token Information

Token Name: bankp2pgold

Token Symbol: bankp2pgold

Decimals: 18

Token Supply: 1,000,000,000

Token Address: ---

Checksum:

b568b8d4cfcfc26718929b54abd9ac85b25e5079

Owner: ---

Deployer: ---

TOKEN OVERVIEW

Fees:

Buy Fees: 10%

Sell Fees: 10%

Transfer Fees: 10%

Fees Privilege: Owner

Ownership: ---

Minting: None

Max Tx Amount/ Max Wallet Amount: Yes

Blacklist: No

Other Privileges: - initial distribution of tokens

- including or excluding from fees
- changing swap threshold
- enabling trades

AUDIT METHODOLOGY

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
- Manual review of the entire codebase by our experts, which is the process of reading source code line-byline in an attempt to identify potential vulnerabilities.
- Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
- Test coverage analysis determines whether the test cases are covering the code and how much code isexercised when we run the test cases.
- Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
- Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.

VULNERABILITY CHECKLIST

CLASSIFICATION OF RISK

Severity

- 🔷 Critical
- High-Risk
- Medium-Risk
- Low-Risk
- Gas Optimization
 /Suggestion

Description

These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.

A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.

A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.

A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.

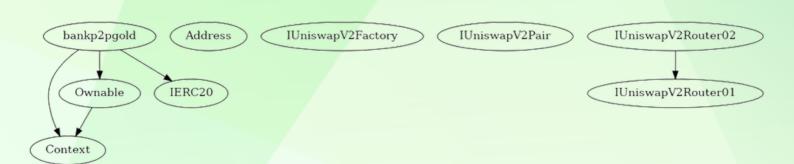

A vulnerability that has an informational character but is not affecting any of the code.

Findings

Severity	Found
♦ Critical	0
♦ High-Risk	1
♦ Medium-Risk	0
♦ Low-Risk	0
Gas Optimization /Suggestions	1

INHERITANCE TREE

POINTS TO NOTE

- owner is not able to change fees (10% for buy and sell,
 0% for transfers)
- owner is not able to blacklist an arbitrary wallet
- owner is not able to set limit for buy/sell/transfer/holding amounts
- owner is not able to mint new tokens
- owner is not able to disable trades

```

Result => A static analysis of contract's source code has been performed using slither, No major issues were found in the output

ntation#state-variables-that-could-be-declared-immutable

1- Adding liquidity (passed):

https://testnet.bscscan.com/tx/0xe1d23839577d021a9627cb22babc95 1fe02bb95bb65f2533bbe01e4b67865d8a

2- Buying when excluded from fees (0% tax) (passed):

https://testnet.bscscan.com/tx/0xbb5b19f4b8b9159ab2ca61a1ede0741 b89b7c0c577897e247820d7908a3e1710

3- Selling when excluded from fees (0% tax) (passed):

https://testnet.bscscan.com/tx/0x19bbf85f19704d1ab701e2fc0ecbff89617e71ef1fd77afbf7fa0c196ef33bb9

4- Transferring when excluded from fees (0% tax) (passed):

https://testnet.bscscan.com/tx/0x19444b2ea10bbd3c8f3d8d5b3c3bf1aac71332f7eae33db65e3d4027d0b96ef3

5- Buying when not excluded from fees (10% static tax) (passed):

https://testnet.bscscan.com/tx/0xa355426458e97ce1004ce4c13e004f72193656010289ec2aa82471538295b39c

6- Selling when not excluded from fees (10% static tax) (passed):

https://testnet.bscscan.com/tx/0x3144465757b4022cc3fc54dce6fcf6b 2b31cd664294f0fc87fc0ec5f582dce79

7- Transferring when not excluded from fees (0% tax) (passed):

https://testnet.bscscan.com/tx/0x0349f50fb65998fb3c6fd80afdd960 6044790157dfabea3c560e3350c4c5eb98

8- Internal swap (passed):

https://testnet.bscscan.com/address/0x41f38cc1fb5d9e3b3d535827ad 1c77f586f17796#internaltx

Centralization – Trades must be enabled

Severity: High

function: enableTrading

Status: Resolved (Contract is owned by safu developer)

Overview:

The smart contract owner must enable trades for holders. If trading remain disabled, no one would be able to buy/sell/transfer tokens.

```
function enableTrading() external onlyOwner {
  require(tradingEnabled == false, "Trading is already enabled");
  tradingEnabled = true;
}
```

Suggestion

To mitigate this centralization issue, we propose the following options:

- Renounce Ownership: Consider relinquishing control of the smart contract by renouncing ownership. This would remove the ability for a single entity to manipulate the router, reducing centralization risks.
- Multi-signature Wallet: Transfer ownership to a multi-signature wallet. This would require multiple approvals for any changes to the mainRouter, adding an additional layer of security and reducing the centralization risk.
- Transfer ownership to a trusted and valid 3rd party in order to guarantee enabling of the trades

Suggestion - Immutable tax

Severity: Informational

Status: Open Overview:

Buy/Sell taxes can not be updated later (10% static tax). Owner might need to change fees based on different market conditions.

Suggestion

Its suggested to have a function to be able to update buy/sell/transfer tax in a safe range (0-10%)

ABOUT AUDITACE

We specializes in providing thorough and reliable audits for Web3 projects. With a team of experienced professionals, we use cutting-edge technology and rigorous methodologies to evaluate the security and integrity of blockchain systems. We are committed to helping our clients ensure the safety and transparency of their digital assets and transactions.
